

**The World's Brightest LED Keychain.....There's No Denying The "WOW" Factor!**

LED's (light emitting diodes) is the first major revolution lighting since the inventions of the incandescent bulb over 119 years ago. Since LED's do not have a filament, they are not damaged under circumstances when a regular bulb would be broken. Our rugged high-efficiency LED light have a life span of 100,000 hours and dramatically lower power requirements, so batteries will last many times longer than with incandescent bulbs. LED's should never be stared at directly. It's bright!
